

Email Access Setup

Instructions

For: alex@truthtruckgroup.com

Microsoft Graph API Setup via Microsoft Entra ID

What this does:

Creates an "app" in your Microsoft 365 account that lets a program read email from Alex's mailbox using Microsoft's official API.

Time required: About 15 minutes

What you'll need: Your Microsoft 365 admin username and password

Part 1: Register the App

1. Open your web browser and go to <https://entra.microsoft.com>
2. Sign in with your admin Microsoft 365 account. This is the account you use to manage email and licenses for Truth Truck Group. It might be alex@truthtruckgroup.com itself if that is the admin account.
3. In the left sidebar, click "Entra ID" (it may also show as "Microsoft Entra ID" or have a small shield icon)
4. Under that, click "App registrations"
5. At the top of the page, click the "+ New registration" button
6. Fill in the form with these values:

Name: Email Access App

Supported account types: Select "Accounts in this organizational directory only" (should already be selected)

Redirect URI: Leave this blank

7. Click the blue "Register" button at the bottom

Part 2: Copy Your IDs

You should now be on the app's "Overview" page. You'll see two important values that look like long strings of letters and numbers with dashes (e.g., a1b2c3d4-e5f6-7890-abcd-ef1234567890).

8. Find "Application (client) ID" on the page. Copy this value and save it somewhere safe (paste it into a note, text message, etc.)
9. Find "Directory (tenant) ID" on the same page. Copy and save this too.

Part 3: Create a Secret (Password for the App)

10. In the left sidebar (under your app's name), click "Certificates & secrets"
11. Click the "Client secrets" tab (it should already be selected)
12. Click "+ New client secret"
13. In the popup, fill in:

Description: email-access-secret

Expires: Pick 24 months (you'll need to redo this step when it expires)

14. Click "Add"
15. You'll see a "Value" column appear with a long string. Copy this value RIGHT NOW and save it.

IMPORTANT: You will NEVER be able to see this secret value again after you leave this page!

Part 4: Give the App Permission to Read Email

16. In the left sidebar (under your app's name), click "API permissions"
17. Click "+ Add a permission"
18. A panel will slide in from the right. Click "Microsoft Graph" (first option, blue icon)
19. Click "Application permissions" (NOT "Delegated permissions" -- make sure you pick the right one!)
20. In the search box, type "Mail" and press Enter
21. Expand the "Mail" section and check this box:
Mail.Read: Lets the app read email
22. Click the blue "Add permissions" button at the bottom of the panel
23. Back on the API permissions page, you'll see your new permission listed with a yellow warning icon
24. Click the button that says "Grant admin consent for Truth Truck Group" (near the top, with a shield icon)
25. A confirmation popup will appear -- click "Yes"
26. The status should now show a green checkmark saying "Granted for Truth Truck Group"

What to Send Me When You're Done

Once you've completed all the steps above, send me these three values. You can text them, email them, or send them however is easiest. Just don't post them publicly anywhere.

1. **Application (client) ID** (from Step 8)
2. **Directory (tenant) ID** (from Step 9)
3. **Client secret value** (from Step 15)

Troubleshooting

Problem: "You don't have permission" at entra.microsoft.com

Fix: You need to sign in with the admin account, not a regular user account.

Problem: Can't find "App registrations"

Fix: Try the search bar at the top of the page. Type "App registrations" and click the result.

Problem: "Grant admin consent" button is grayed out

Fix: You're not signed in as a Global Administrator. Check who the admin is for your M365 subscription.

Problem: Forgot to copy the client secret

Fix: You'll need to delete the old one and create a new one (repeat Steps 10-15).
